

Opportunity: z/OS Systems Programmer with deep REXX Expertise

Global Technology Solutions Group (GTSG) is a 35-year-old consulting services company focused on Mainframe systems since our inception.

We are looking for a z/OS systems programmer with excellent REXX programming skills. Broad IBM program product and ISV software product knowledge is required.

Primary responsibility would be working with a team of mainframe systems programmers to execute a variety of mainframe projects. We require a REXX programmer who has a good understanding of z/OS and associated products to develop utilities to automate some of our work.

Experience developing/modifying programs that

- Scan JCL libraries for program names, parameters, etc. associated with an ISV program product and generating equivalent for the IBM replacement product
- Scanning ISV program product input and configuration files (job schedulers for example) and generating equivalent for the IBM replacement product
- Other utilities as required

At the present time, all activities are remote and unlikely to change. Compensation based on experience, architecture & leadership skills among other factors.
